

Gusti Rais

Canberra, Australia

gusti.fatu@gmail.com | +61 424 381 718 | www.gustirais.com | www.linkedin.com/in/gustirais

Final-year Advanced Computing student specializing in machine learning and data science to bridge the gap between technical complexity and strategic decision-making. Proficient in R and Python across the full data science lifecycle from data modelling and ETL pipeline design through to interactive BI reporting. Proficient in Python, R, and SQL. Exposed to data lakehouse architecture and experienced with Power BI dashboard development. Proven ability to translate ambiguous business requirements into analytical solutions and communicate insights to diverse stakeholders.

EDUCATION

Bachelor of Advanced Computing (Hons.)

Jul 2024 - Jun 2026

(Expected)

Australian National University, Canberra, Australia

- **Relevant Coursework:** Software Engineering Project, Statistical Machine Learning, Computer Vision, Computer Networks, Document Analysis, Algorithms
 - **Software Engineering Capstone:** Served as **Project Manager**, leading Agile sprints with *Jira* and *Confluence*, managing team workflows, and delivering project milestones on schedule.

Bachelor of Science (B.S.) - Computer Science

Aug 2022 - Jun 2026

(Expected)

University of Indonesia, Depok, Indonesia

AWARDS

- ANU Residential Scholarship
- ANU Chancellor International Scholarship
- Finalist of GEMASTIK Data Competition

PROFESSIONAL EXPERIENCE

Data Scientist Intern

March 2026 – Present

Australian Medical Council, Canberra, Australia

- Designed and built ETL pipelines in Python, R, and SQL to extract and consolidate data from multiple SQL databases, performing cleansing and transformation to produce high-quality datasets for scheduling systems and downstream reporting analytics.
- Developed and optimised scheduling algorithms in R and Python, applying statistical modelling to improve examiner allocation accuracy and assessment throughput.
- Applied Many-Facet Rasch Measurement (MFRM) to model examiner and candidate effects in high-stakes medical assessments, producing quantified bias estimates that directly informed assessment panel decisions.
- Designed and deployed a Python/SQL microservices pipeline ensuring data integrity and privacy compliance across sensitive assessment datasets, enabling reliable downstream analytics and reporting.

Data Scientist Intern

December 2025 – March 2026

Altimedia Solutions, Jakarta, Indonesia

- Designed and trained a machine learning model (Python, scikit-learn) on historical operational data, creating data cleaning pipelines to automate workforce scheduling, reducing manual allocation effort and improving assignment consistency.
- Led stakeholder discovery sessions with PT Mattel Indonesia, translating ambiguous business questions into analytical requirements.
- Architected a microservices-based ETL/ELT pipeline in Python and SQL for data retrieval, transformation, storage, and delivery, ensuring integrity and usability across analytics and reporting workflows.
- Engaged in data lakehouse architecture discussions, covering centralised schema design, data warehousing patterns, and governance layers, contributing to platform design decisions for an AI-ready enterprise data stack.
- Designed and developed Power BI dashboards and reporting artefacts to surface predictive analytics and operational KPIs for senior stakeholder reporting.

Fullstack Developer

August 2025 – April 2026

Pookie Platforms, Canberra, Australia

- Architected and deployed full-stack job matching platform infrastructure, orchestrating seamless CI/CD pipelines for both frontend and backend systems serving multiple concurrent users.
- Integrated NLP capabilities for resume parsing and job description analysis, enhancing matching precision and user experience
- Collaborated effectively with cross-functional stakeholders and aligning development priorities with business objectives and user needs.

Software Engineering Intern

November 2024 – February 2025

Ooredoo Group, Doha, Qatar

- Designed and deployed a Generative AI solution (GraphRAG with LangChain) to automate policy document retrieval and verification.
- Engineered a custom finance tracker and visualization system in R, performing data modeling and integration across multiple sources to streamline departmental financial reporting.
- Built and deployed interactive Power BI dashboards to visualise workforce KPIs and financial data, enabling senior leadership to monitor performance trends and make evidence-based decisions
- Collaborated in a cross-functional team to build automated data pipelines and reporting tools, ensuring data integrity and usability for both technical and business stakeholders.

TECHNICAL PROJECTS

Python Developer and Project Manager

March 2025 – November 2025

Time Space (Honours), Canberra, Australia

- Led and coordinated a team of 7 developers across sprint cycles, conducting daily standups, managing technical dependencies, and served as primary stakeholder liaison with Griffith University research staff.
- Designed project timelines and conducted comprehensive risk assessments for feature implementations, proactively identifying technical dependencies and resource constraints to keep deliverables on schedule
- Engineered Python-based computer vision pipeline for automated facial recognition and object detection, evaluating and optimizing multiple deep learning models (YOLO, RetinaNet, MTCNN).
- Managed stakeholder communications with Griffith University research team, facilitating regular requirement gathering sessions and progress updates.
- Established documentation standards and code quality practices across the development team.

ORGANIZATIONAL EXPERIENCE

Cofounder, Vice President

December 2024 – November 2025

ANU Data Science Community, Canberra, Australia

- Established organizational mission and vision while implementing financial management systems and bookkeeping processes to ensure sustainable operations.
- Co-founded and led the ANU Data Science Community, designing and delivering member training programs and forging partnerships with industry organisations including Accenture and Trellis Data.
- Cultivated strategic partnerships with leading Canberra organizations including Accenture, Aristotle, and Trellis Data, connecting members with industry experts for mentorship and professional development.

TECHNICAL SKILLS

- **Languages & Querying:** Python, R, SQL, JavaScript/TypeScript, Dart (Flutter), C/C++, Rust, Go
- **Data & Analytics:** Power BI, ETL/ELT pipeline design, data warehousing, data lakehouse architecture, dimensional modelling, data modelling & cleansing, predictive analytics
- **Machine Learning & AI:** PyTorch, TensorFlow, scikit-learn, NLP, Computer Vision, GraphRAG, LangChain
- **Web & Infrastructure:** React, TypeScript, RESTful APIs, GraphQL, microservices, CI/CD pipelines
- **Tools & Workflow:** Jira, Confluence, Agile/Scrum, Git, Slack, Microsoft Suite
